I am writing you today to express my support for XM Satellite Radio, and to encourage you to reject NAB's Petition 04-160. I am a truck driver and I find this "Instant Traffic and Weather" feature very useful. I can plan my route through the cities covered from hundreds of miles away, before I'm able to receive a local radio station. If you oppose this petition, and any others like it, you will help me to avoid major traffic and weather delays. This saves fuel, and it will save both of us time. Quite simply, if I hear traffic is bad in Washington, I'll take an alternate route. Then I'll be one less vehicle sitting in traffic. Another consideration should be the "Amber Alerts" displayed on the screen. With a press of a button, my receiver stores the displayed license number and make/model of vehicle to look out for. I can recall this info later if I need to. This is progress, folks. Don't stand in the way of it.
